Wiki

For e621, wikis are little information pieces about artists, species or a specific subject. They are typically short and only provide information relating to their given topic in the context of e621.

The wiki endpoints are very unstable/buggy and should not be used for any serious work with the API.

You can find the official docs [here (https://e621.net/help/show/api#wiki)](https://e621.net/help/show/api#wiki).

Note: The `List` endpoint does NOT take parameters despite what the docs say.

Note: The `History` endpoint can sometimes return a 500 error.
